

Does a job in the Non-Profit sector, working with a small international team, in an open and unbiased culture tick your boxes? Join us as C# Developer!

We are the World Marrow Donor Association

The World Marrow Donor Association (WMDA) is headquartered in Leiden. Our goal is to make sure that each patient, worldwide, has equal access to high quality cells for transplantation from stem cell donors whose rights and safety are protected. We facilitate doctors in matching stem cell donors and patients. <https://wmda.info/about-us/what-we-do/>

The Job – Full Stack Developer

Approximately 2/3 of your time is spent on Scrum based, C# development renewing; extending and maintaining our application landscape. Innovation for the worldwide community is key in our approach and requires your special interest and attention. WMDA-IT is currently transitioning towards a cloud native environment with (Bus)DevOps using the latest technologies (PWA, serverless computing, no/low code solutions, DevOps, CI/CD, Microservices, Machine Learning etc). The remaining time is spent on professionalisation, support and maintenance of our community (in a variety of programming languages). You participate in international projects from scoping, requirements gathering through implementation and standardisation. We trust you take initiatives that help our growing organisation move forward, solve problems, take initiatives and give you a lot of freedom to do so in a “family” oriented setting.

Working in our team

We promote global collaboration and the sharing of best practices for our members (for example doctors, researchers, donor recruiters) and we stimulate ourselves, and you, to do the same. You will be challenged, appreciated and entrusted with a high level of responsibility in our informal organisation. We will learn from you and you will learn from us.

Are you the one?

Send an e-mail with your CV and motivational letter to <mailto:hr@wmda.info>, if you:

- Have 4+ years of experience in designing, building and managing multiple complex applications using C#/.NET Core, preferably in an Azure cloud environment. Preferably also using PostgreSQL, Python (Django), PHP (Laravel).
- Want to take ownership of support problems and being proactive when dealing with issues.
- Have experience in JavaScript frameworks (Vue.js, Angular.js, Node.js), Web development, knowledge of different databases (Oracle, PostgreSQL, MySQL), test automation, and have an open mind on new technology.
- Know SOLID inside out, love architectural challenges, prefer a test driven approach, work SCRUM based and enjoy translating user requirements into high quality coded solutions.
- Have an excellent command of the English language and preferably one or more other languages.
- Have a European work permit and live (or want to relocate) within a 70 kilometres’ radius of Leiden.
- Are open to all cultures.

What else do we have to offer?

The opportunity to work with people from all over the world, from participating member organisations to project groups and being involved in the development process of software solutions. An office at 5 minutes' walking distance of Leiden Centraal station. Opportunity to grow within the organisation, show own initiative and have fun in a growing organisation. Team membership of a small core team in the Netherlands (10+ FTE) extended with community involvement and a lot of interesting challenges to work on.

This vacancy is open to people with an EU-work permit only

Please note that acquisition is not appreciated.
