Does a job in the Non-Profit sector, working with a small international team tick your boxes? Join us as C# Developer!

We are the World Marrow Donor Association

The World Marrow Donor Association (WMDA) is headquartered in Leiden. Our goal is to make sure that each patient, worldwide, has equal access to high quality cells for transplantation from stem cell donors whose rights and safety are protected. We facilitate doctors in matching stem cell donors and patients: https://wmda.info/about-us/what-we-do/

The Job – Full Stack Developer

The majority of your time is spent on Scrum based, C# development working on greenfield projects. WMDA is currently transitioning towards a cloud native environment focused primarily on the Microsoft stack with Azure and Azure DevOps as our primary toolset. A knowledge of Azure isn't a requirement but a willingness to learn and dive into this is. You participate in international projects from scoping, requirements gathering through implementation and standardisation. We trust you to make decisions that help our growing organisation move forward, solve problems, take initiatives and we will give you a lot of freedom to do so in a small but skilled development team.

Working in our team

We work in a small company (< 10 full time employees) but work with organisations all around the world. We establish best practices for all of our community and we will give you the opportunity to help improve and add to these standards from a technical perspective. You will be challenged and entrusted with a high level of responsibility in our informal organisation. Our development team is new, but very skilled and working very hard on the professionalisation of our team.

Are you the one?

Send an e-mail with your CV and motivational letter to hr@wmda.info, if you match the below:

- Confident in designing, building and managing multiple applications using C#/.NET Core, preferably in an Azure cloud environment. We use PostgresSQL but having experience with any relational database and PHP development would be highly advantageous.
- Proactive when dealing with issues, be confident in refactoring and enjoy writing tests.
- Have an open mind on new technology. We predominantly use C# and Angular but also have some Python Django and PHP. We try to use whatever language is best for the current task.
- Know SOLID inside out, love architectural challenges, prefer a test driven approach, work SCRUM based and enjoy translating user requirements into high quality coded solutions.
- Have an excellent command of the English language and preferably one or more other languages.
- Have a European work permit are willing to commute to Leiden.

What else do we have to offer?

- We're working on multiple rebuild projects so you will have a major impact in decisions and technical direction on these greenfield projects.
- A 13th month.
- Hybrid working model with a maximum of two days a week in the office (usually one).
- An ideal office location, we're a 2 minute walk from Leiden Centraal.
- The opportunity to work with people all around the world, open source projects and the chance to make a huge impact on people's lives.
- A CAO level pension.

This vacancy is open to people with an EU-work permit only.
Please note that acquisition is not appreciated.
