

**Did you know that every 27 seconds someone in the world is diagnosed with blood cancer? Help us find their stem cell donor match as a Full-stack C# developer!**

### **The Job – Full Stack Developer – focus on the backend.**

Your work will be critical to saving lives. With your Scrum based, C# development skills you make the difference. Most of your focus will be on development in the backend, working in our small, not-for-profit organisation. However, since we work in a diverse IT environment, you also participate in building and managing complex applications, front-end development, API's, microservices, data related activities and development in other software languages. You have the Microsoft stack with Azure and Azure DevOps as your primary toolset and work with CI/CD. We trust you to make decisions that help our organisation move forward, to solve problems, to take initiatives and we will give you a lot of freedom to do so. Trust us to have an eye for your personal growth and ambition.

### **Ready to have a social impact?**

Send an e-mail with your CV to [recruitment@wmda.info](mailto:recruitment@wmda.info) if you can bring this to the table:

- Confidence in designing, building and managing multiple applications using C#/.NET Core, preferably in an Azure cloud environment. We use PostgreSQL but having experience with any relational database and PHP development would be highly advantageous
- Experience with function apps, service bus development, API development and Microservices
- An open mind to technologies. We predominantly use C# and Angular (but also have some Python Django and PHP)
- SOLID experience, a love for architectural challenges and a preference for a test-driven approach
- SCRUM experience and a taste for translating user requirements into high quality coded solutions
- Excellent command of the English language and preferably one or more other languages
- A European work permit and willingness to commute to Leiden in a hybrid setting (1 – 2 days a week as needed).

### **WMDA**

Headquartered in Leiden we work on our goal to make sure that each patient, worldwide, has equal access to high quality cells for transplantation from stem cell donors whose rights and safety are protected. We facilitate doctors in matching stem cell donors with patients in need. <https://wmda.info/about-us/what-we-do/>

We establish best practices for all of our community. You could help, improve and add to these standards from a technical perspective.

### **What else do we have to offer?**

- An ideal office location, we're a 2-minute walk from Leiden Centraal.
- A 13<sup>th</sup> month of salary.
- Hybrid working model with a maximum of two days a week in the office (usually one).
- The opportunity to work with people all around the world, opensource projects and the chance to make a huge impact on people's lives.
- A great pension.
- And a nice salary of course.

Less than 0,5% of the global population is on the worldwide database of registered voluntary blood stem cell donors. Global collaboration is key to improve this situation, so more lives can be saved. WMDA opens doors to diversity and equality for both patients and stem cell donors. Thanks to our international partnerships and web services, we ensure best matching donors and cord blood units can be selected for patients in need of a transplant, regardless of where they live.

**This vacancy is open to people with an EU-work permit only. Please note that acquisition is not appreciated.**
